

## What is PowerFolder

Sync files between multiple computers automatically

PowerFolder is a solution to synchronize, share, backup and access files. The software connects computers and allows to exchange all kind of data, which you want to share with your colleagues or customers. It can also keep your office and home computer in sync or backup important data to another computer. It automatically detects new or changed files and keeps all your computers in sync. To make your data transfers faster, PowerFolder allows downloads from multiple sources, and only transfers the changed parts of a file.

Share files with colleagues, project members or business partners

In one sentence: PowerFolder takes care of your data - Simple, secure and reliable.

PowerFolder is easy to setup for beginners and highly configurable for professionals. Clients for Windows, Mac and Linux computers enable cross platform synchronization. At any time PowerFolder ensures the privacy of your data, using industrial standard security features.

Backup your data continuous or scheduled to your own servers or workstations

PowerFolder can be used over the Internet, in LAN, via VPN or in Intranets without a dedicated server and without a connection to the PowerFolder homepage or server.

To test our product the Trial version can be downloaded and tested for free.

PowerFolder exists since 2003 and is currently available in all major languages. Special conditions are granted for schools and universities as well as for non profit organisations and editors.

Use our secure On-line Storage to create an remote backup

### Is it secure?

Yes – PowerFolder Pro uses industry standard encryption (AES) and identity management (RSA), which is used by most banks. This offers a maximum protection from unauthorized access to your data (similar to SSL). When transferring data over the internet this is highly recommended.

Identity management with public/private key mechanism (RSA) provides a secure mutual identification of all computers. Also the web access is secure by SSL.

You can also use PowerFolder within an isolated VPN, without any connection to our Website. It is possible to limit the connections to only selected IPs or IP-ranges.

So it's your choice how much security you want. PowerFolder is able to provide it.

Hundred thousands of users and thousands of companies and organisations are using PowerFolder. Some are just syncing their laptop with their office computer to access their data while they are on a remote location. Others backup millions of files globally, in a highly secure VPN environment or connecting their branches worldwide. Please check our homepage for references.

#### Customize PowerFolder

If you need some special feature or want to integrate PowerFolder into your infrastructure, contact us and we will be happy to help you in a quick and uncomplicated way.

## Usecases

- » Multi computer synchronization
  - » Easily share and transfer files
  - » Automatic or scheduled backup
  - » Secure Online Storage (optional)
  - » Online team work
- 
- » Easy to setup, easy to use
  - » Automatic change detection
  - » Runs on Windows, Mac and Linux
  - » Maximum security: Encrypted transfers
  - » High Priority Support
  - » No limitations
  - » Multisource-downloads
  - » Available in many languages
  - » Always connect through web tunnel
  - » Silently runs as system service
  - » Accessible everywhere via mini webserver
  - » Filelist CSV writer
  - » Highly configurable: synchronization profiles
- 
- » Works over Internet, LAN or in Intranets
  - » Delta-transfer copies only the changed file parts
  - » Private peer-to-peer networking
  - » Efficient networking
